- **Absolute Advantage:** Introduced by Adam Smith, this concept explains how countries benefit from specializing in the production of goods where they are most efficient.
- **Comparative Advantage:** David Ricardo's theory emphasizes that even if one country is less efficient overall, mutual gains from trade are possible if countries specialize according to their comparative advantages.
- **Heckscher-Ohlin Model:** This explains trade based on factor endowments, such as labor and capital, and how countries export goods that intensively use their abundant factors.
- **New Trade Theory:** Incorporates economies of scale and product differentiation, explaining the existence of intra-industry trade and the role of monopolistic competition.

Trade Policy and Its Impact

The book discusses various trade policies and their implications.

- **Tariffs and Quotas:** Tools used to protect domestic industries but can lead to inefficiencies and trade disputes.
- **Free Trade Agreements:** Such as NAFTA and the European Union, which promote economic integration and reduce barriers to trade.
