Sample Problem and Solution

Problem: In a circle with center O, two chords AB and CD intersect at point P inside the circle. The lengths are AP = 3cm, PB = 5cm, CP = 4cm, and PD = 6cm. Find the length of segment AD.

Solution:

- Using the Power of a Point theorem for point P:

$$(AP \times PB = CP \times PD)$$

$$(3 \times 5 = 4 \times 6)$$

$(15 = 24)$? This suggests a discrepancy, indicating the segments may not be correctly aligned or additional data is needed.

- Alternatively, if the chords intersect, then:

$$(AP \times PB = CP \times PD)$$

Since the products are not equal, this configuration might be impossible unless the problem has a typo or additional data.

- Conclusion: Always verify data consistency; if consistent, use the theorem to find missing lengths.
