- Operating cash flow: Cash generated from core business operations.

Common Cash Flow Questions and Their Answers

- What are the main differences between cash flow and profit?

Answer:

While both relate to financial performance, cash flow and profit are distinct concepts:

- Profit (or net income) is calculated based on accrual accounting, recognizing revenues when earned and expenses when incurred, regardless of when cash is received or paid.
- Cash flow reflects actual cash transactions, providing a real-time picture of liquidity.

Key differences:

- Profit can be positive even if cash flow is negative, especially if sales are made on credit.
- Cash flow can be positive even if a company reports a net loss, such as when it sells assets or receives financing.

Example: A company might record a profit of \$50,000 but have a negative cash flow of \$20,000 due to delayed customer payments or large capital expenditures.

- How do you prepare a cash flow statement?

Answer:

A cash flow statement summarizes the cash inflows and outflows classified into three sections: operating, investing, and financing activities.

Steps to prepare:

- Start with net income: Obtain from the income statement.
- Adjust for non-cash items: Add back depreciation, amortization, or other non-cash expenses.
- Account for changes in working capital: Adjust for changes in accounts receivable, inventory, accounts payable, etc.
- List cash flows from investing activities: Include purchases or sales of assets.
- List cash flows from financing activities: Document debt issuance, repayment, share issuance, or dividends paid.
- Calculate net increase/decrease in cash: Sum all sections to determine overall change.
- Reconcile with the opening and closing cash balances.

Tip: Many accounting software packages can generate cash flow statements automatically.

- What is free cash flow, and why is it significant?

Answer:

Free cash flow (FCF) is the cash a company generates after accounting for capital expenditures needed to maintain or expand its asset base.

Formula:

`Free Cash Flow = Operating Cash Flow - Capital Expenditures`

Importance:

- Indicates the company's ability to generate cash that can be used for dividends, debt repayment, or reinvestment.
- A positive FCF suggests healthy cash generation capacity.
- Investors often scrutinize FCF to assess valuation and financial stability.

Example: If a company reports operating cash flow of \$1 million and spends \$200,000 on capital investments, its free cash flow is \$800,000.
