- Employment and Income: Stable employment history and income verification.
- Assets: Savings, checking, and other assets.
- Property Data: Type of property, location, and appraisal details.

Scoring Process

- Data Collection: Borrower's financial details are entered into the system.
- Analysis: The system evaluates the data against FHA guidelines.
- Risk Classification: The system assigns a risk tier based on the input data.
- Decision Recommendation: Based on the analysis, the scorecard outputs one of the following:
 - Approve: The loan meets all criteria.
 - Refer: The application needs further review or documentation.
 - Manual Underwrite: The application requires a detailed manual review.

Outcomes and Next Steps

- If approved, the lender proceeds with the loan process.
- If referred, additional documentation or clarification may be needed.
- Manual underwriting involves a detailed review by an underwriter outside the automated system.

Key Components of the FHA Total Mortgage Scorecard

The scorecard evaluates multiple factors, each contributing to the overall risk profile.

- Credit Score and Credit History

- FICO scores are a primary factor.
- The system considers recent credit activity, payment history, and existing debts.

- Income and Employment Stability
 - Steady employment over the past two years.
 - Verified income through pay stubs, tax returns, or bank statements.
 - Consideration of employment gaps and self-employment income.

- Debt-to-Income Ratio (DTI)
 - Total monthly debts divided by gross monthly income.
 - FHA guidelines typically allow DTI ratios up to 43%, but exceptions exist based on compensating factors.

- Assets and Reserves
 - Savings accounts, retirement accounts, and other liquid assets.
 - Reserves demonstrate the borrower's ability to handle unexpected expenses.

- Property Factors
 - Type of property (single-family, multi-family).
 - Location and condition.
 - Appraised value and LTV ratio.

- Other Factors
 - Previous foreclosure or bankruptcy history.
