Sample Chapter 11 Test B Geometry Questions and Answers

Below are some representative questions from Chapter 11 Test B along with detailed solutions to help you understand the problem-solving process.

Question 1: Find the measure of an inscribed angle given its intercepted arc.

Problem: An inscribed angle in a circle intercepts an arc measuring 100° . What is the measure of the inscribed angle?

Answer:

- Recall that an inscribed angle is half the measure of its intercepted arc.
- Therefore, the inscribed angle = $\frac{1}{2} \times 100^\circ = 50^\circ$.

Key Point: Inscribed angles are always half the measure of the intercepted arc.

Question 2: Determine the length of an arc given the radius and the central

angle.

Problem: A circle has a radius of 10 units. Find the length of an arc intercepted by a central angle of 60° .

Answer:

- Use the arc length formula: $L = r \times \theta$ (where θ is in radians).
- Convert 60° to radians: $\theta = \frac{\pi}{3}$.
- Calculate: $L = 10 \times \frac{\pi}{3} = \frac{10\pi}{3}$ units.

Key Point: Arc length depends on the radius and the measure of the central angle in radians.

Question 3: Find the measure of a tangent angle given certain segments.

Problem: A tangent and a secant intersect at a point outside a circle. The secant intersects the circle at points A and B, with segments $AP = 4$ units and $PB = 6$ units. Find the measure of the angle between the tangent and the secant.

Answer:

- Use the tangent-secant angle theorem: The measure of the angle is half the difference of the intercepted arcs.
- First, find the lengths related to the arcs or use given data to determine the intercepted arc measures.
- If the problem provides the arc measures directly, then:

$$\text{Angle} = \frac{1}{2} (\text{big arc} - \text{small arc})$$

- Otherwise, additional information is needed. Assuming the arcs are known, plug in values accordingly.

Key Point: The angle formed by a tangent and a secant equals half the difference of the intercepted arcs.

Key Theorems and Formulas for Chapter 11

Mastering the following theorems and formulas is crucial for answering questions accurately:

Theorem 1: Inscribed Angle Theorem

- An inscribed angle is half the measure of its intercepted arc.
- $\angle \text{inscribed} = \frac{1}{2} \times \text{arc}$.

Theorem 2: Central Angle Theorem

- The measure of a central angle equals the measure of its intercepted arc.

Theorem 3: Tangent and Secant Power Theorem

- If a tangent and secant intersect outside a circle at point P:

$$\angle P = \frac{1}{2} (\text{arc intercepted by secant and tangent}).$$

Arc Length Formula

- $L = r \times \theta$, with θ in radians.

Sector Area Formula

- $\text{Area} = \frac{\theta}{2\pi} \times \pi r^2 = \frac{1}{2} r^2 \theta$.
